

## **Grade 10 Life Sciences Work Plan**

### **6 July to 18 July 2020**

For the next 10 lessons you will be working on the next part of the History of Life on Earth.

1. You need to read through pages 270 – 272 in your textbook to remind your brain where we are in the work.
2. Use page 273 to make a summary called “The Cambrian Explosion” in your notebooks.
3. Use your textbooks, pages 274 – 276, and make notes on the Coelacanth, Archaeopteryx and Thrinaxodon.
4. Now use the sets of notes in the Google folder called Mass Extinctions, and your textbooks from pages 277 – 279.

There are 7 separate documents to go through, and one video to watch.

Copy out/print out each of the different sets of notes and put them into your notebooks (the diagrams are nice, but not critical)
